EXPERIENCE

Data Engineer | *Wall Street Access* *Feb 2022 – Jun 2026*

- Engineered a Django intranet hosted on Linux that centralized compliance, accounting, and operations workflows, enabling employees to execute recurring processes and download reports independently while eliminating 120+ hours of manual work per quarter.
- Built a Python/SQL ETL pipeline that standardized trade and position data from three custodians, reducing reconciliation time by 90%.
- Developed an automated regulatory reporting system using Python, SQL Server, the Bloomberg API, and openpyxl to generate formatted Excel workbooks and calculate position haircuts using FFIEC metrics, saving 12 hours of manual work per month.
- Developed hundreds of Python scripts and SQL Server queries to retrieve, filter, and process trade, account, and customer records, supporting regulatory inquiries, compliance investigations, and internal reviews.
- Served as the company's sole developer, maintaining and extending internal applications while collaborating directly with business departments to troubleshoot issues, implement new functionality, and adapt systems to evolving requirements.

PROJECTS

GameGuess | Full Stack Web Application *Nov 2024*

- Developed an interactive JavaScript game that uses Pannellum.js to render panoramic Skyrim environments and Leaflet.js to let players guess locations on an interactive map.
- Built a full-stack application using React, Material UI, Express, and MySQL, implementing user authentication, challenge creation, ratings, and randomized challenge generation.

SDOS | Swift iOS Application *Nov 2020*

- Developed a Swift iOS application that combines IMDb and web-scraped Instagram data into a graph-based structure to calculate degrees of separation between actors and a personal contact.
- Implemented breadth-first search (BFS) to efficiently identify shortest connection paths between individuals within the combined dataset.

TECHNICAL SKILLS

LANGUAGES: Python, SQL, JavaScript, Java, C++, Swift

FRAMEWORKS AND LIBRARIES: Django, React, Express, Node.js, openpyxl, Material UI, Leaflet.js

DATABASES AND TOOLS: SQL Server, MySQL, Git, Linux, AWS (S3, EC2, RDS), Xcode

EDUCATION

B.S. Computer Programming and Information Systems *May 2021*

Farmingdale State College
